1. Generally
 2. Quality
 3. Support

1. Generally

The MPD allows manufacturers of vending machines and cash registers to quickly and easily integrate an EFT/POS Terminal into their application. With the MPD payments can be done quickly, easily and safely. Since the MPD is a product from SIX Payment Services and homologation for all the EFT/POS-Terminals has already been done this will reduce manpower and costs for all partners involved when implementing.

2. Quality

The Integrator is given a testscript by SIX Payment Services which allows him to verify the integration. For working reliability integrations are divided into two categories **served** and **unattended** point of sales.

2.1 served point of sales

The integration will be judged by SIX either on the premises of SIX or the premises of the integrator. If everything is working correctly integration into the daily payment system is possible. SIX will not charge the first half a day. Any travel expenses involved will be charged to the integrator. All further costs will be charged according to the SIX pricelist.

For further information please refer to www.six-payment-services.com

2.2 unattended point of sales

As an unattended point of sales an automat employment is understood. So that the requirements of the card issuer can be fulfilled, the integration of automated terminals is accompanied by Lutz Consulting. According to our experience costs of approximate CHF 4'000.-- are to be expected. For project support the following achievements are to be understood: Discussion of the requirements, project discussion and Know How transfer, Hotline for questions and conformity examination. The letter of permission is issued by SIX Payment Services AG according to the test report from Lutz Consulting.

For further information please refer to <http://www.lutzconsulting.ch>

3. Support

Our integrationmanagement will be happy to assist you with your projects.
