

# cCREDIT HOSPITALITY GATEWAY

## THE PMS INTEGRATED OMNI-CHANNEL SOLUTION FOR EUROPE

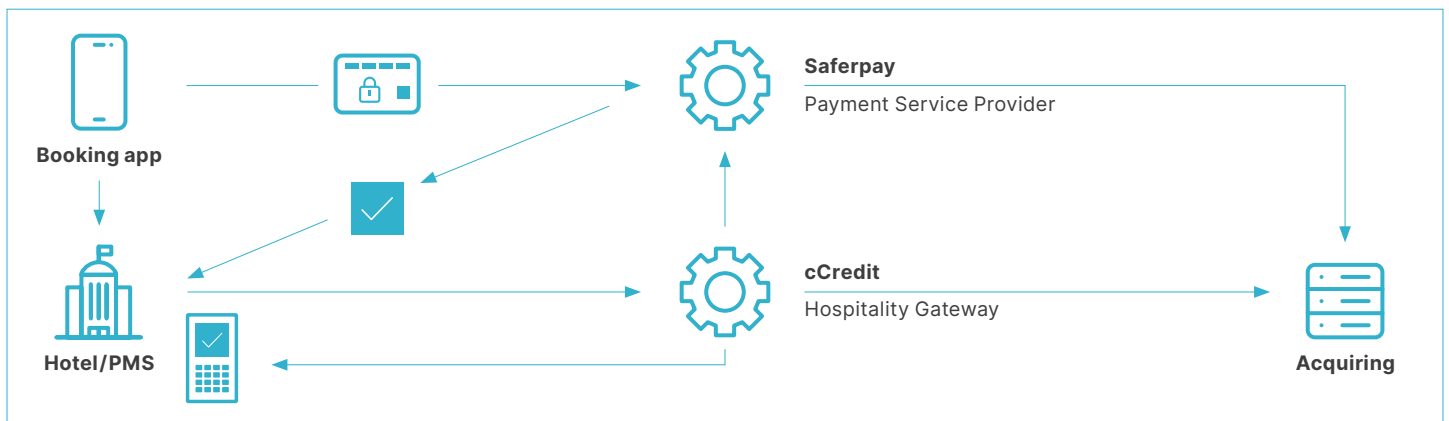

From booking to checkout: the cCredit Hospitality Gateway easily and securely combines all of your payment processing requirements. The PMS integrated omni-channel solution for hotels amalgamates all payments throughout Europe and across all channels.

### IT'S THAT SIMPLE

An interface connects the hotel's property management system (PMS) to the cCredit Hospitality Gateway of SIX Payment Services. This seamless connection between the systems simplifies the payment process and prevents incorrect entries. The automated data transmission thus reduces the administrative work for the reception desk and for the accounting department. All common payment methods, whether domestic or international, are accepted. All payment processing requirements are met.

### THE BENEFITS INCLUDE

- More efficient payment procedures and processes
- All common debit and credit cards accepted
- PCI compliance
- Extended functions for the hospitality sector such as
  - Advance reservations
  - Reservation adjustments
  - Reservation cancellations
  - Subsequent billing (Late charge/No show)
- Numerous value-added services, e.g. DCC
- Lower administrative costs
- SIX Payment Services as a central service provider for on-site and online payment solutions, acquiring, uniform and transparent reporting as well as many other additional functions.

### SIMPLE, SECURE AND SEAMLESS CONNECTION OF ALL SALES CHANNELS

For example, if a room is reserved online, the payment information is encrypted via the Payment Service Provider (PSP) Saferpay and transmitted to the hotel's PMS using a token.

When the customer checks out, the hotel system triggers payment via the cCredit payment terminal using the stored token. It is not necessary to present the card again.

All payments are processed centrally via the acquiring services of SIX Payment Services. Reservations and sales flow together seamlessly in one system.
