

TIM connects

Integrating payment terminals made easy

TIM is the new and flexible interface from SIX for quick and easy integration into your point of sale solution.

Integrating TIM (Till Integration Module) is quite simple. This module enables seamless and automatic communication between your point of sale application or software and the ep2 payment terminals from SIX. TIM gives you and your customers a free choice of the payment terminal you would like to integrate.

Full setup service

If you opt for TIM, you will benefit from free developer support via telephone or e-mail. SIX also offers on-site support from our specialists (charges payable). What's more, we support you in completing final acceptance by offering free type verification for your point of sale solution.

TIM offers you the following benefits:

- Secure, reliable transaction workflow
- Independent of operating systems
- Simple, understandable API
- Various development environments and programming languages are supported
- Modular technical architecture for any known payment procedure
- Can now also be used in point of sale applications of mobile devices such as tablets or smartphones
- Optimum support for distributed cash register systems
- Support from qualified integration experts at SIX

Numerous payment terminals supported

TIM supports the ep2 payment terminal range from SIX. The sole requirement is communication via WLAN or LAN.

Operating systems

TIM is easy to use with the following operating systems:

- Windows 7, 8, 8.1 and 10
- Linux
- MAC OSX
- ANDROID
- iOS

Programming languages

The API* of TIM is available for the following programming languages:

- Java
- Java for Android
- Swift for iOS
- .net

* API: Application Programming Interface

Log function

TIM produces records on a continuous basis and saves them in log files every day. Sensitive data is logged in a masked form, which ensures that you do not need to worry about special requirements with regard to storing transaction data.
