1

## Customer wants to pay in cryptocurrency

During the check-out process for an online order, your customer selects cryptocurrency as their means of payment in the payment window.

2

## Select cryptocurrency

The customer now sees a selection of cryptocurrencies they can use to pay and selects the preferred currency.

3

## QR code is generated

A QR code is generated automatically and appears in the payment window.

4

## Scan QR code

The customer scans the QR code with their crypto wallet and confirms the payment.

5

## Receive confirmation

As usual, you receive confirmation of successful payment from your payment service provider and your shop system if applicable.

6

## Customer receives confirmation

The customer receives a payment confirmation in their crypto wallet.

# Key points at a glance

## Does your customer need an Internet connection?

In order to pay with WL Crypto Payments, your customers need to have a wireless or WLAN connection.

## Is a transaction with cryptocurrencies secure?

Crypto transactions meet the same security standards as all other payment methods we offer. As soon as you receive a payment confirmation, we guarantee its pay-out to you.

## Where can I find an overview of the crypto transactions executed?

You can find an overview of the crypto transactions executed via our normal merchant portals.

## How do refunds work?

Refunds can be automatically initiated via Saferpay. Your customer receives an e-mail where they can enter their bank details. Refunds are in Swiss francs (CHF) and paid directly to a Swiss bank account.

### How do chargebacks work?

Chargebacks are not possible with WL Crypto Payments.

### What happens in the case of a partial payment?

A partial payment may occur when your customer manually changes the payment amount in their crypto wallet – this is only possible with certain crypto wallets. If your customer does not pay the total amount, the paid partial payment will be automatically refunded. You receive a payment confirmation once the total amount has been paid.

### What happens in the case of an overpayment?

An overpayment may occur when your customer manually changes the payment amount in their crypto wallet – this is only possible with certain crypto wallets. In this case, you receive a payment confirmation and the difference is automatically refunded to your customer.

### Can your customers also shop with their smartphone?

If your customer has a crypto wallet on their smartphone, your customer can complete the transaction directly in their crypto wallet. Alternatively, the crypto address and amount can be manually copied into the crypto wallet.
