

# MRX – Merchant Reconciliation XML

## Processor Specification

Version v1.5  
16. July 2017

## Glossary and abbreviations

Abbreviation	Description
MRXD	Merchant Reconciliation XML Detailed
PMS	POS Management System
POS	Point of Sale
XML	eXtensible Markup Language
XSD	XML Schema Definition, See [R1]

## References

Ref.	Document	Version
[R1]	Specification of the XML schema definition language from the W3 consortium	

## Integrated documents

Ref.	Document	Version
[I1]	MerchantReconciliationTypes-v1.5.xsd	v1.5
[I2]	MerchantReconciliationXML.detailed.v1.5.xsd	v1.5

## Version History

Version	Date	Changes with this version
v1.1	4.3.2012	Refactoring of xsd files New optional fields: branchOfficId, dcclnd, isReversal, entryType
v1.4	26.6.2016	transactionType: add fields aICAcqTolssSC baseTrxType: added addlStmntText, salesSlipNum, paymentType: added extSettlingRefNo, cbTrxType: added addlStmntText cbTrxType: added addlMercData added codeValueType, baseTrxType/trmTrxNo is new optional, summarySlipType/trmPer is new optional
v1.5	16.7.2017	Removed fields: baseTrxType/salesSlipNum, cbTrxType, financialAdjustmentType/chargeback Added fields: transactionType/aTrxPwcbSC, transactionType/aComEffHighSC, baseTrxType/caseId, baseTrxType/origTrxDate, baseTrxType/remark, baseTrxType/accountIndex, stlAccountType/bic, sumOCType/noValidTrxPwcb, sumOCType/aTrxPwcbOC, sumSCType/noValidTrxPwcb, sumSCType/aTrxPwcbSC, sumSCType/aComEffHighSC, condFullType/tariffDetail, baseTrxType/trxIndicator Changed field: Content of sumSCType/aComEffSC (v1.4) can now be found in sumSCType/aComEffHighSC!

## 1 Merchant Reconciliation XML Detailed - Introduction

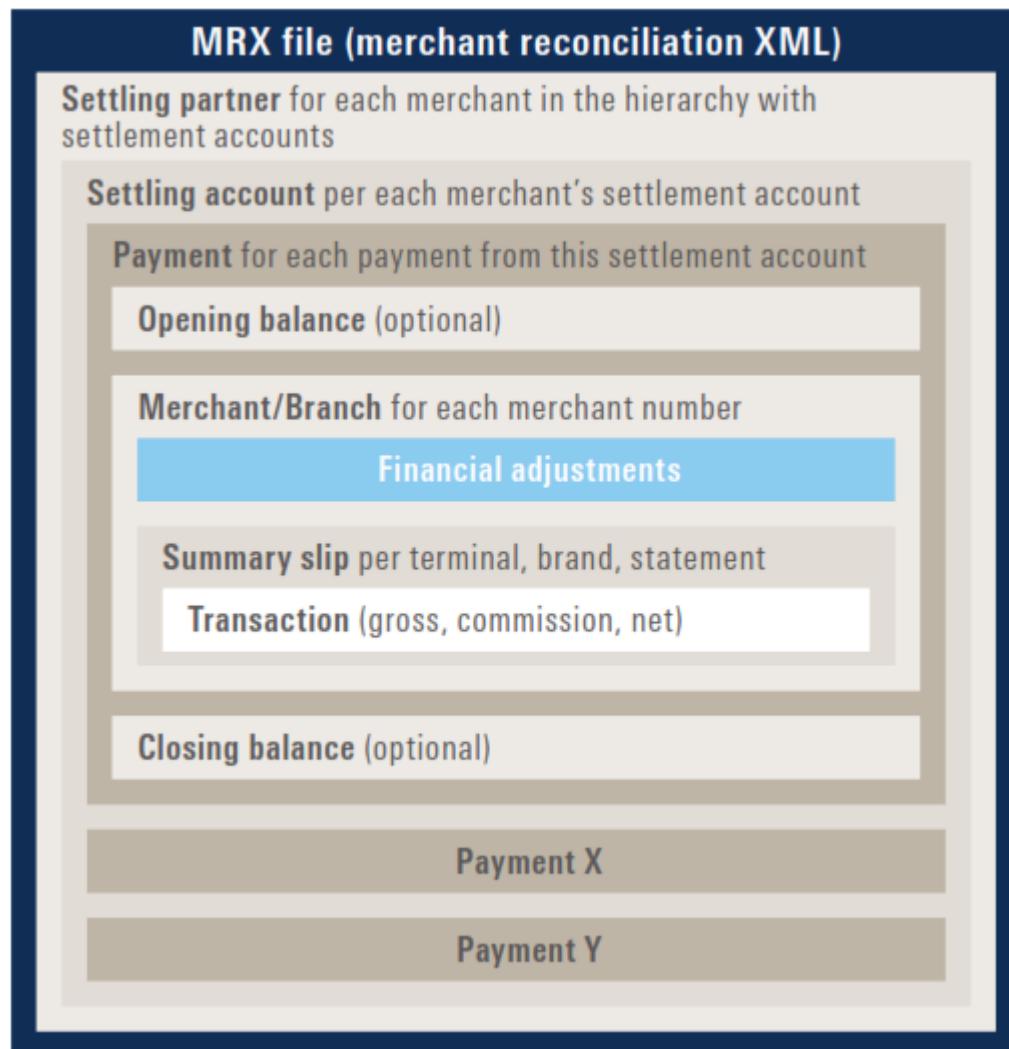

The „Merchant Reconciliation XML Detailed“ (MRXD)file is a reconciliation file sent from the acquirer to the merchant containing detailed information about processed transactions and payments to the merchant.

## 2 File specification

The core file specification is provided as a XML Schema (XSD) according to W3C recommendations and specifications (see [R1])). The XSD (see [I1], [I2]) is provided on request and should have been delivered with this document. It is best viewed with a specialized XML/XSD viewer (e.g. Altova XMLSpy). For easier reading without additional tools an html version for viewing in a Web Browser is provided, too.

### 2.1 Structure

The MRX Detailed includes – in comparison to the base MRX – more information on transaction level.

merchantReconciliationXML

Top XML element of the file

reportingPart

Contains the partner information on the level in a partner hierarchy on which this MRX file is set up

settlingPart

Contains the partner information on the hierarchy level on which settlement accounts are set up. For independent partners or flat hierarchies this can be the same as reportingPart.

stlAccount

Contains Information about a settlement account, including bank account information and settlement currency.

payment

A payment element is present for each payment effectuated on the corresponding settlement account. In case of a non-payment, the element payment/paymentType contains a 'N'. A non-payment can happen e.g. for negative balances.

businessPart

The business partner element contains information about the business within a payment effectuated by a specific business partner (merchant location). For independent partners or flat hierarchies this can be the same as the reportingPart and/or settlingPart.

contract

Contains information about a specific contract. This can e.g. be a 'face to face' or a 'eCommerce' contract. This container also contains the 'merchant contract number' (VP-Nummer).

fAdj

Contains information about financial adjustments that were booked for this contract.

sumSlip

Contains information about a summary slip (or terminal period, Tagesabschluss).

trx

Information about a single valid transaction.

errTrx

Information about erroneous transactions, i.e. one that has been rejected.

## 2.2 Differences between MRX v1.5 and MRXD v1.5

The MRX Detailed includes – in comparison to the base MRX – more information on transaction level (below marked in red):

```
<authNo>666555</authNo>

    <name>Domestic</name>
</clearingRegion>
<aICAcqToIssSC c="EUR" e="2">-1.370000000</aICAcqToIssSC>
</trx>
```

### cond – merchant service charge details

The element transactionType/cond lists each applied price position contributing to the merchant service charge (blended or IC++) per transaction. Please consult the MRX acquirer specification for an explanation of the sent condCode values.

## 3 Definitions

xsd Schema Definition  
html from the xsd generated documentation readable by any web browser

### 3.1 Date and time elements

#### xs:Date

Date fields in standard xsd format.

Structure: YYYY-MM-DD

Example: <trxDate>2007-08-02</trxDate>

#### xs:Time

Time fields in standard xsd format.

Structure: hh:mm:ss

Example: <trxTime>21:20:54</trxTime>

### 3.2 Amount Elements

The name of amount elements always starts with an 'a' prefix. The suffix of an amount tag designates the type of amount:

**OC** amount in **original transaction currency**  
this is the currency in which the transaction actually happened from a cardholder viewpoint

**SC** amount in merchant **settlement currency**  
this is the currency of the settlement account in which the merchant is being paid

**BC** amount in acquirer **base currency**  
this currency occurs only for VAT (Value Added Tax, MwSt) related amounts

Each amount tag has two attributes:

'c' currency code in 3 character alphabetic ISO format (e.g. 'CHF' for Swiss Francs, 'EUR' for Euro).

'e' exponent (how many digits after the decimal point)

The actual amount field comes **with** the decimal point and the sign.

Negative amounts have a 'Minus'-Sign ('-').

Example and meaning of amount fields:

aTrxOC original transaction amount in the original currency

aTrxGrosSC gross amount of the transaction in settlement currency

(= aTrxOC in settlement Currency). If original currency and settlement currency are the same (in most cases) these two amount fields will show the same value.

aComEffSC rounded commission amount of the transaction in settlement currency

aComEffHighSC commission amount in high precision of the transaction in settlement currency (if applicable)

aTrxNetSC Net amount of the transaction in settlement currency (= gross – commission). This is the amount that is actually paid out for a transaction.

Example of amount fields (2 decimal calculation):

<aTrxOC c="EUR" e="2">118.0</aTrxOC>	118.00 Euro
<aTrxGrossSC c="EUR" e="2">118.0</aTrxGrossSC>	118.00 Euro
<aTrxNetSC c="EUR" e="2">114.91</aTrxNetSC>	114.91 Euro
<aComEffSC c="EUR" e="2">-3.09</aComEffSC>	-3.09 Euro

Example of amount fields (more than 2 decimal calculation):

<aTrxOC c="EUR" e="2">118.0</aTrxOC>	118.00 Euro
<aTrxGrossSC c="EUR" e="2">118.0</aTrxGrossSC>	118.00 Euro
<aTrxNetSC c="EUR" e="2">114.9089</aTrxNetSC>	114.9089 Euro
<aComEffSC c="EUR" e="2">-3.09</aComEffSC>	-3.09 Euro
<aComEffHighSC c="EUR" e="2">-3.0911</aComEffHighSC>	-3.0911 Euro

### 3.3 VAT Amounts

If applicable, VAT is calculated and shown on payment level as a fAdj with stlEntryType 47.

Example of a fAdj with stlEntryType 47:

- aFAdjNetSC                    net VAT amount (VatNetAmount \* VatPercentage)
- aFAdjGrosSC                gross VAT amount (equals net VAT amount)
- VATPercentage                contains the VAT percentage with which the VAT amount was calculated
- VATGrossAmount             = VatNetAmount + (VatNetAmount \* VatPercentage)
- VatNetAmount                the amount which is liable to VAT

```

<fAdj>
  <stlEntryType>47</stlEntryType>
  <prod>ALL</prod>
  <fAdjDate>2009-03-03</fAdjDate>
  <passStlEntryNo>200903030022748</passStlEntryNo>
  <aFAdjNetSC e="2" c="EUR">-53.10000000</aFAdjNetSC>
  <aFAdjGrosSC e="2" c="EUR">-53.10000000</aFAdjGrosSC>
  <txtElem>
    <id>VatPercentage</id>
    <value>19</value>
  </txtElem>
  <txtElem>
    <id>VatGrossAmount</id>
    <value>-332.57</value>
  </txtElem>
  <txtElem>
    <id>VatNetAmount</id>
    <value>-279.47</value>
  </txtElem>
</fAdj>

```

VAT amounts in sumSC elements:

- aVatSC      sum of all stlEntryType 47 aFAdjNetSC amounts on the respective level
- aVatBC      sum of all stlEntryType 47 aFAdjNetSC amounts on the respective level in Base Currency

## 3.4 Rounding Differences

If applicable, rounding differences are calculated and shown on payment level as a fAdj with stlEntryType 46.

## 3.5 DCC Transactions

DCC Transactions can be identified by the element trx/dcclnd.

```
<dcclnd>1</dcclnd>
```

### 3.5.1 DCC payback

If applicable, the DCC payback will be visible in sumSC elements on levels payment and summarySlip. Condition Code 10 indicates DCC payback.

```

<sum>
  <sumSC>
    <sumCond>
      <condCode>10</condCode>
      <aComEffExclVatSC c="CHF" e="2">59.55</aComEffExclVatSC>
      <percComRate>-1</percComRate>
    </sumCond>
    :
  </sumSC>
</sum>

```

## 3.6 Purchase with cashback transactions (PwCB)

Purchase with cashback transactions can be identified by the presence of element `trx/ aTrxPwcbSC` which indicates the cashback amount as part of a purchase.

### 3.6.1 PwCB payback

If applicable, the PwCB payback will be visible in `sumSC` elements on levels payment and summarySlip. Please refer to the MRX acquirer specification for the respective condition code.

```
<sum>
  <sumSC>
    <sumCond>
      <condCode>271</condCode>
      <aComEffExclVatSC c="EUR" e="2">2.65</aComEffExclVatSC>
      <percComRate>-1</percComRate>
    </sumCond>
    :
  </sumSC>
</sum>
```

## 3.7 Chargebacks

Chargeback transactions are sent in the same structure as purchase transactions, but can be identified by the `trx/trxIndicator` value 140 or 141 (see **Error! Reference source not found.** for other possible values).

```

<stlEntry>
  <sumSlip>
    <trx>
      <trxType>Retail</trxType>

    -->
  </sumSlip>
</stlEntry>

```

**Figure 1: Appearance of a chargeback in MRX**

Chargeback transactions show additional information related to the chargeback case and the original purchase transaction:

trxIndicator	Value 140 identifies a chargeback
caseId	The ID under which the case is tracked in the chargeback system
pan	Truncated card number of the original purchase
origTrxDate	Date of the original transaction
trmId	Terminal number of the original purchase
refNo	Acquirer reference number of the original purchase

The original purchase is referenced by the combination of trmId and refNo.

## 3.8 Sum

Each level from reportingPart to sumSlip contain aggregated amounts and counters. These are available in the sum tag.

sumSC	Summary of amounts and counters in the merchant settlement currency. Such a tag is present for each settlement currency.
sumOC	Summary of amounts and counters in the original transaction currency. Such a tag is present for each original transaction currency.

## 3.9 PAN

The primary account number (PAN / card number) in the trx or errTrxs container is truncated for security reasons implied by the international card schemes. The first six and the last four digits are visible, the rest is replaced with 'X'.

Example: <pan>523227XXXXXX8446</pan>

### 3.10 Payment amount details

Payment amount details are provided as unrounded or rounded amounts. The paid-out amount can be reconstructed<sup>1</sup> by adding up either column in Table 1.

	XML hierarchy	Unrounded amounts	Rounded amounts
Opening balance (only for preceding non-payment periods)	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++openingBalance	aOpBalSC	aOpBalSC
Transaction gross amount	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++businessPart ++++++contract ++++++stlEntry ++++++sumSlip ++++++trx	aTrxGrossSC	aTrxGrosSC
Transaction related merchant service fees	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++businessPart ++++++contract ++++++stlEntry ++++++sumSlip ++++++trx	aComEffHighSC	aComEffSC
Not transaction related fees and adjustments related to a specific POS/WebShop.	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++businessPart ++++++contract[extVPNo <> 0] ++++++stlEntry ++++++fAdj	aFAdjNetSC	aFAdjNetSC
Not transaction related fees and adjustments unrelated to a specific POS/WebShop.	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++fAdj[stlEntryType <> 46]	aFAdjNetSC	aFAdjNetSC
Accumulated rounding difference	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++fAdj[stlEntryType == 46]	-	aFAdjNetSC
Accumulated rounding difference	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++sum +++++sumSC	aComEffSC - aComEffHighSC	-

**Table 1: Amount details provided by MRX, resulting in either a reimbursement or a closing balance (see Table 2)**

<sup>1</sup> Only for MRX v1.5 and later versions.

	XML hierarchy	Unrounded amounts	Rounded amounts
Reimbursed amount (paymentType "P"; the new zero closing balance is not shown)	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++sum +++++sumSC	aPaymentsSC	aPaymentsSC
or			
Closing Balance (paymentType "N"; amount will be carried over as opening balance for the next payment period)	merchantReconciliationXML +reportingPart ++settlingPart +++stlAccount ++++payment +++++openingBalance	aClBalSC	aClBalSC

**Table 2: Reimbursed or carried over amount**

### 3.11 Payment periods without payments

MRX reports each payment period with processed transactions. This is regardless whether at the end of a payment period (e.g. weekly) the merchant received funds (because there has been a positive credit balance) or not (because the merchant's credit balance has been negative because of excessive refunds, chargebacks, etc.).

For payment periods ending without a payment to the merchant, MRX uses the concept of a "non-payment". In such cases, all transaction processed during this period are being reported.

Please note that each transaction will only be reported once in the payment period during which it has been processed. The transaction data won't be sent again, even if the eventual payment is executed at a later date.

1. Payment periods ending with a regular payment to the merchant are marked with paymentType "P" (see 2.1, payment). For each executed payment, a unique reference number paymentNo (for some markets extSettlingRefNo) is generated, which will be reproduced on the bank statement for reconciliation purposes:

```

</businessPart>
<paymentType>P</paymentType>
<paymentDate>2020-03-23</paymentDate>
<paymentNo>202003230049445</paymentNo>
<valueDate>2020-03-24</valueDate>
```

**Figure 2: Payment period ending with a payment**

In case there has been a carry-over from the previous payment period, the credit balance at the beginning of this payment period is indicated by an openingBalance:

```
</businessPart>
<openingBalance>
  <aOpBalSC c="EUR" e="2">-339.860000000</aOpBalSC>
  <opBalDate>2020-03-09</opBalDate>
</openingBalance>
<paymentType>P</paymentType>
<paymentDate>2020-03-23</paymentDate>
<paymentNo>202003230049445</paymentNo>
<valueDate>2020-03-24</valueDate>
```

**Figure 3: Payment period ending with a payment with carry-over from previous payment periods**

2. Payment period ending without a payment to the merchant are marked with paymentType “N” (see 2.1, payment). No unique payment identifier paymentNo is generated, instead closingBalance indicates the credit balance at period’s end and a reason code clBalReason (see **Error! Reference source not found.**) states why the payment couldn’t be executed:

```
</businessPart>
<closingBalance>
  <aClBalSC c="EUR" e="2">-245.170000000</aClBalSC>
  <clBalDate>2020-03-10</clBalDate>
  <clBalReason>10</clBalReason>
</closingBalance>
<paymentType>N</paymentType>
```

**Figure 4: Payment period ending without a payment, without carry-over from previous payment period**

In case there has been a carry-over from the previous payment period, the credit balance at the beginning of this payment period is indicated by an openingBalance:

```
</businessPart>
<openingBalance>
  <aOpBalSC c="EUR" e="2">-339.860000000</aOpBalSC>
  <opBalDate>2020-03-09</opBalDate>
</openingBalance>
<closingBalance>
  <aClBalSC c="EUR" e="2">-245.170000000</aClBalSC>
  <clBalDate>2020-03-10</clBalDate>
  <clBalReason>10</clBalReason>
</closingBalance>
<paymentType>N</paymentType>
```

**Figure 5: Payment period ending without a payment, with carry-over from previous payment period**

## 4 Code Values

### 4.1 Clearing Region

clearingRegion: Card scheme clearing region.

Code value	Description
1	Domestic
2	Within the same region
3	Between different regions
4	Within IntraEuropean Western region
5	Within IntraEuropean Eastern region
6	Within IntraEuropean EEA (former Eurozone) region
7	Region Europe-UK
8	Region Europe-Israel/Turkey

Table 3: Allowed values for field clearingRegion

### 4.2 Closing Balance Reason

clBalReason: specifies the reason why no payment instruction for a merchant settlement has been produced.  
clB

Code value	Description
10	Negative balance of technical merchant account.
20	Balance of technical merchant account is below minimum amount for settlement.
30	Merchant settlement has been blocked by acquirer.
40	Insufficient data for merchant settlement.

Table 4: Allowed values for clBalReason

### 4.3 Contract Category

contractCategory: Category of acceptance contract.

Code value	Description
1	Face to Face (Presence)
2	Mail/Phone Order (Card not present)
4	Cash Advance (Presence)
5	Internet Electronic Trx. (Card not present)
8	SecureECom (Card not present)
9	DCC/FtF (Presence)
10	DCC/SecureECom (Card not present)
13	e Commerce (Card not present)
18	Mail/Phone Order DCC (Card not present)
19	Internet Electronic Trx. DCC (Card not present)

Table 5: Allowed values for contractCategory

## 4.4 Entry Types

EntryType: indicates how cardholder authentication data has been entered3

Code value	Description
0	Unknown
1	EntryType-Track1
2	EntryType-Track2
3	EntryType-Track3
4	EntryType-Chip
5	EntryType-Manual
6	Contactless EMV chip entered transaction
7	Contactless Magnetic stripe standard entered transaction
8	Account ID originating from digital device
10	EMV fallback
11	Server or Wallet
12	QRC Code TAGC
15	CredentialOnFile

Table 6: allowed values for field **entryType**

## 4.5 Origin

Protocol used in delivery of transaction to processor.

Code value	Description
BSP	BSP - IATA Trx-Einlieferfile (Airlines)
CDS	CDS Einlieferungen
CTAC	International Forecast Standards Forum (IFSF) Host2Host Link
DTAA	DT1.34 AUA Einlieferung
DTAT	DT Austria
DTGA	DT1.34 Garagen Kredit Einlieferung
EP2	ep2
EVTR	Paylife EV Terminals
GARA	Garagen Debit Einlieferung
GICC	German ISO-8583 Credit Card (GICC) Protocol
IFSF	International Forecast Standards Forum Petrol
ONL	Manual entry (online) in acquirer backoffice
QRES	Quick Restsaldo-Ausbuchung
QUIC	Quick Einlieferungen
SaferPay	Saferpay
SLIP	Paper Sale Slip
UDK	Umsatzdaten der deutschen Kreditkartengesellschaften
Voice Auth	Voice Authorization

Table 7: Allowed values for field **origin**

## 4.6 Product

prod: Acceptance product.

Code value	Description
ALIPY	Alipay
BCMC	Bancontact
BLUEC	Bluecode
CUP	UnionPay
DMC	DebitMasterCard
DINER	DINERS credit card
ECAMC	MasterCard
ECDIR	Swiss Maestro cards
IDEAL	iDEAL
JCB	Japan Credit Bureau
MAES	Maestro Debit Card
MCARD	Migrosbank M-Bank
PQNIC	Payconiq
TWINT	Twint
VISA	VISA
VPAY	V PAY
VSDB	VisaDebit
WCHAT	WeChat Pay

Table 8: Allowed values for field *prod*

## 4.7 Mobile Voucher product

prod: Swiss mobile voucher product.

Code value	Description
TOLEB	Mobile Lebara
TOLYC	Mobile Lyca
TOMBU	Mobile M-Budget
TOORA	Mobile Salt.
TOSUN	Mobile sunrise
TOSWI	Mobile Swisscom
TOYAL	Mobile yallo

Table 9: Allowed values for field *prod* (mobile voucher)

## 4.8 Scheme Type

schemeType: Describes the type of a sharing scheme for merchant service charges.

Code value	Description
2	Split of merchant service charges with a third party.

Table 10: Allowed values for field *schemeType*

## 4.9 Transaction Indicator

trxIndicator: Describes the chargeback indicators.

Code value	Description
100	1 <sup>st</sup> presentment – no chargeback
140	Merchant debit from chargeback
141	Merchant credit from chargeback

Table 11: Allowed values for field *trxIndicator*

## 4.10 Transaction Type / Transaction Type ID

trxTypeID / trxType: Type of the transaction.

Code Value	Description (trxType)
0	Unknown
1	Retail
2	Authorisation
3	Cash Advance
4	Cash Withdrawal
5	Reservation
6	Cash Loading
7	UniqueTrx
8	Inc Reservation
9	Refund
10	Deposit
11	Delayed Retail
13	Collection
21	CFT
22	Disbursement
23	Balance Inquiry
24	Prepaid Mobile
25	Prepaid Purse Unload
26	Pin Service Advice Crediting
27	Pin Service Advice Not Crediting
28	Pin Advice On-Us
29	Delivery Charge
34	PIN check
35	Quick Cancel in Favour of cardholder
36	PIN Change
37	Cash Refund
92	Voucher
93	Voucher Direct Load

Table 12: Allowed values for fields *trxTypeId* / *trxType*

## 4.11 Unblending Categories

unBlendCat: In order to implement an ECC directive, the Card Schemes introduced categorization of transactions according to the card type used therein. This allows a higher degree of cost transparency for the merchant. This initiative is known as “Unblending”

The optional unBlendCat element indicates the specific unblending category for this transaction defined by VISA and MasterCard.

<i>Code value</i>	<i>Description</i>
0	Unspecified
1	Credit
2	Debit
3	Commercial

**Table 13: Allowed values for field unBlendCat**

## 5 File structure and field description

### 5.1 MerchantReconciliationTypes

#### 5.1.1 element *merchantReconciliationXML*

diagram	<p>The diagram illustrates the structure of the <b>merchantReconciliationXML</b> element. It consists of a main element <b>merchantReconciliationXML</b> which contains four child elements: <b>fileHeader</b>, <b>mercNoticeHeader</b>, <b>acqContact</b>, and <b>reportingPart</b>. <b>fileHeader</b> is described as 'Description of file content'. <b>mercNoticeHeader</b> is described as 'Reporting parameter of this merchant notice.'. <b>acqContact</b> is described as 'Acquirer contact information'. <b>reportingPart</b> is described as 'Merchant statement'.</p>
properties	content complex
children	<a href="#">fileHeader</a> <a href="#">mercNoticeHeader</a> <a href="#">acqContact</a> <a href="#">reportingPart</a>

#### 5.1.2 element *merchantReconciliationXML/fileHeader*

diagram	<p>The diagram illustrates the structure of the <b>fileHeader</b> element. It consists of a main element <b>fileHeader</b> which contains three child elements: <b>interfaceVersionNo</b>, <b>fileCreationDate</b>, <b>processingDate</b>, and <b>productionFlag</b>. <b>interfaceVersionNo</b> is described as 'v1.5'. <b>fileCreationDate</b> is described as 'Creation date of this file.'. <b>processingDate</b> is described as 'Processing cycle date which produced this file.'. <b>productionFlag</b> is described as 'Indicates whether file contains test or productive data: 'P' for productive File/'T' for Testfile'.</p>
properties	content complex
children	<a href="#">interfaceVersionNo</a> <a href="#">fileCreationDate</a> <a href="#">processingDate</a> <a href="#">productionFlag</a>
annotation	documentation Description of file content

#### 5.1.3 element *merchantReconciliationXML/fileHeader/interfaceVersionNo*

diagram	<p>The diagram illustrates the structure of the <b>interfaceVersionNo</b> element. It consists of a main element <b>interfaceVersionNo</b> which contains one child element <b>v1.5</b>.</p>
type	restriction of <b>xs:string</b>
properties	content simple
annotation	documentation v1.5

### 5.1.4 element *merchantReconciliationXML/fileHeader/fileCreationDate*

diagram	 <b>fileCreationDate</b> Creation date of this file.
type	<b>xs:date</b>
properties	content simple
annotation	documentation Creation date of this file

### 5.1.5 element *merchantReconciliationXML/fileHeader/processingDate*

diagram	 <b>processingDate</b> Processing cycle date which produced this file.
type	<b>xs:date</b>
properties	content simple
annotation	documentation Processing cycle date which produced this file.

### 5.1.6 element *merchantReconciliationXML/fileHeader/productionFlag*

diagram	 <b>productionFlag</b> Indicates whether file contains test or productive data: 'P' for productive File/'T' for Testfile
type	restriction of <b>xs:string</b>
properties	content simple
facets	Kind Value Annotation length 1 enumeration P enumeration T
annotation	documentation Indicates whether file contains test or productive data: 'P' for productive File/'T' for Testfile

### 5.1.7 element *merchantReconciliationXML/mercNoticeHeader*

diagram	<pre> classDiagram     mercNoticeConfigType &lt; -- mercNoticeHeader     mercNoticeHeader {         mercNoticeUniqueId         mercNoticeDate         noticePerFrom         noticePerTo     }     mercNoticeUniqueId &lt; -- mercNoticeUniqueId     mercNoticeDate &lt; -- mercNoticeDate     noticePerFrom &lt; -- noticePerFrom     noticePerTo &lt; -- noticePerTo   </pre>
type	extension of <a href="#">mercNoticeConfigType</a>
properties	content complex
children	<a href="#">mercNoticeUniqueId</a> <a href="#">mercNoticeDate</a> <a href="#">noticePerFrom</a> <a href="#">noticePerTo</a>
annotation	documentation Reporting parameter of this merchant notice

### 5.1.8 element *merchantReconciliationXML/acqContact*

diagram	<pre> classDiagram     mercNoticeContactType &lt; -- acqContact     acqContact {         contact         phoneNo         faxNo         eMailAddr     }     contact &lt; -- contact     phoneNo &lt; -- phoneNo     faxNo &lt; -- faxNo     eMailAddr &lt; -- eMailAddr   </pre>
type	<a href="#">mercNoticeContactType</a>
properties	content complex minOcc 0 maxOcc 1
children	<a href="#">contact</a> <a href="#">phoneNo</a> <a href="#">faxNo</a> <a href="#">eMailAddr</a>
annotation	documentation Acquirer contact information

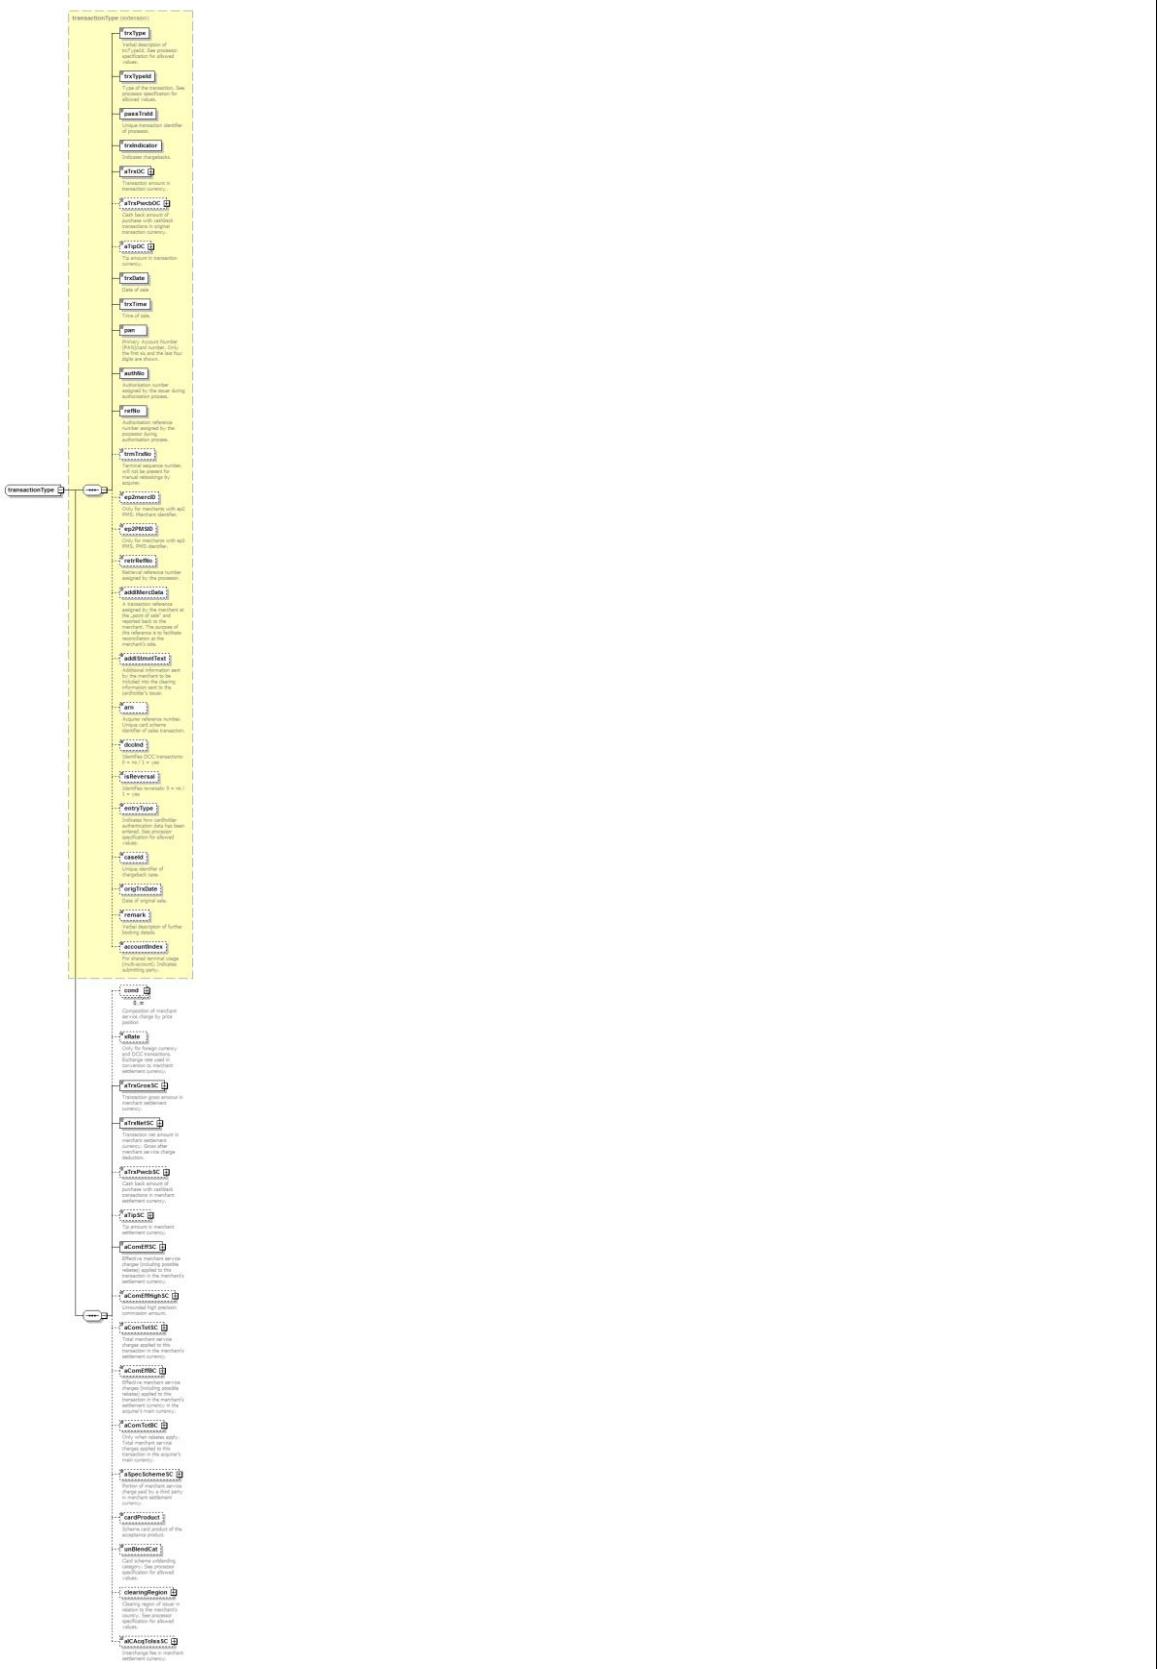

### 5.1.9 element *merchantReconciliationXML/reportingPart*

diagram	<pre> classDiagram     class reportingPartType {         settlingPart *--&gt; reportingPart         settlingPart *--&gt; passRepPartId         settlingPart *--&gt; repPartAddr         settlingPart *--&gt; branchOfficeId         settlingPart *--&gt; sum     }     class reportingPart     class passRepPartId     class repPartAddr     class branchOfficeId     class sum   </pre> <p>The diagram illustrates the structure of the <b>reportingPartType</b> element. It is a complex type containing a <b>settlingPart</b> element, which is aggregated by the <b>reportingPart</b> element. The <b>settlingPart</b> element also contains four other elements: <b>passRepPartId</b>, <b>repPartAddr</b>, <b>branchOfficeId</b>, and <b>sum</b>. The <b>reportingPart</b> element is labeled "Merchant statement". Associations are shown with multiplicity "1..∞" at the <b>settlingPart</b> end.</p>
type	<a href="#">reportingPartType</a>
properties	content complex
children	<a href="#">settlingPart</a> <a href="#">passRepPartId</a> <a href="#">repPartAddr</a> <a href="#">branchOfficeId</a> <a href="#">sum</a>
annotation	documentation Merchant statement

## 5.2 MerchantReconciliationXML

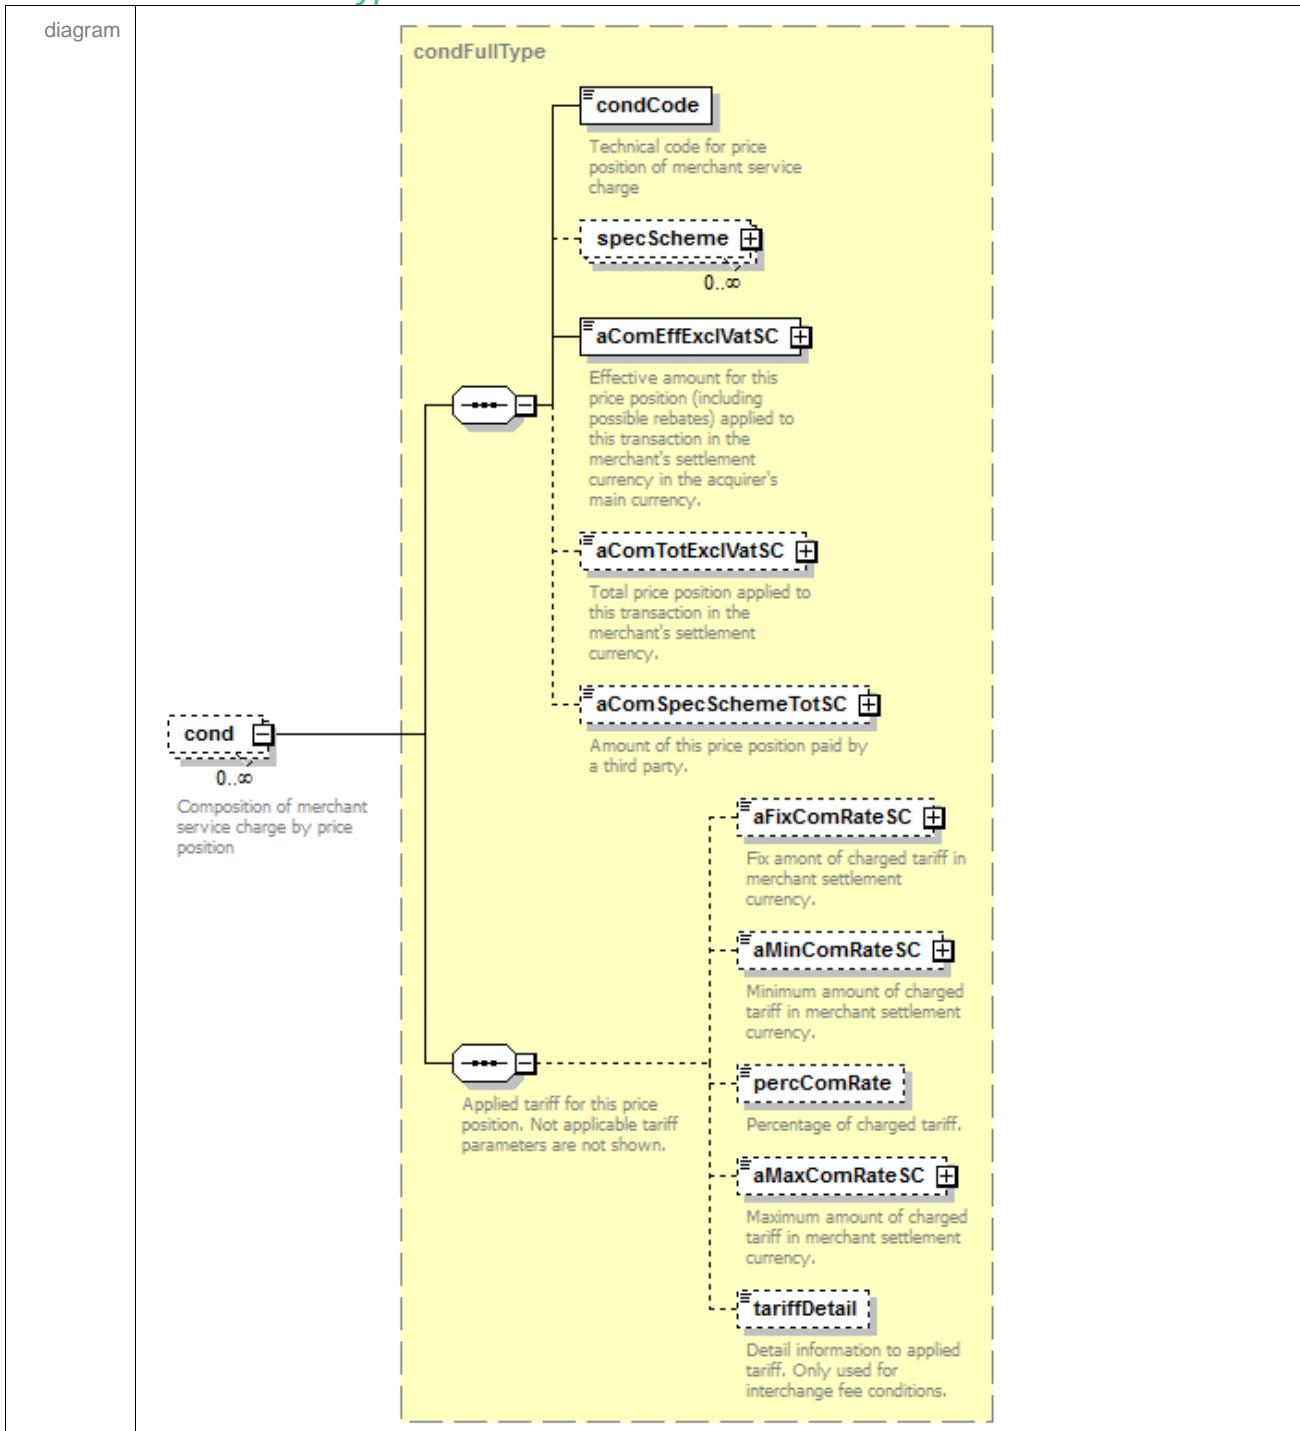

### 5.2.1 redefinition of *complexType transactionType*

diagram

type	extension of <a href="#">transactionType</a>
properties	base <a href="#">transactionType</a>
children	<a href="#">trxType</a> <a href="#">trxTypeIeld</a> <a href="#">passTrxId</a> <a href="#">trxIndicator</a> <a href="#">aTrxOC</a> <a href="#">aTrxPwcbOC</a> <a href="#">aTipOC</a> <a href="#">trxDate</a> <a href="#">trxTime</a> <a href="#">pan</a> <a href="#">authNo</a> <a href="#">refNo</a> <a href="#">trmTrxNo</a> <a href="#">ep2mercID</a> <a href="#">ep2PMSID</a> <a href="#">retrRefNo</a> <a href="#">addlMercData</a> <a href="#">addlStmntText</a> <a href="#">arn</a> <a href="#">dccInd</a> <a href="#">isReversal</a> <a href="#">entryType</a> <a href="#">caseld</a> <a href="#">origTrxDate</a> <a href="#">remark</a> <a href="#">accountIndex</a> <a href="#">cond</a> <a href="#">xRate</a> <a href="#">aTrxGrosSC</a> <a href="#">aTrxNetSC</a> <a href="#">aTrxPwcbSC</a> <a href="#">aTipSC</a> <a href="#">aComEffSC</a> <a href="#">aComEffHighSC</a> <a href="#">aComTotSC</a> <a href="#">aComEffBC</a> <a href="#">aComTotBC</a> <a href="#">aSpecSchemeSC</a> <a href="#">cardProduct</a> <a href="#">unBlendCat</a> <a href="#">clearingRegion</a> <a href="#">aICAcqTolssSC</a>
used by	element <a href="#">summarySlipType/trx</a>

## 5.2.24 complexType *sum1SC1OCType*

diagram	<p>The diagram illustrates the structure of the <code>sum1SC1OCType</code> complex type. It features a central class named <code>sum1SC1OCType</code> represented by a rounded rectangle with a blue border. Two directed associations originate from this central class: one pointing to a class named <code>sumSC</code> (also in a rounded rectangle with a blue border), and another pointing to a class named <code>sumOC</code> (in a similar rounded rectangle). Both the <code>sumSC</code> and <code>sumOC</code> classes have a small '+' sign in their bottom right corner. A callout box with a grey border and black text provides additional context: 'Aggregation by merchant settlement currency' for the association with <code>sumSC</code>, and 'Aggregation by transaction currency' for the association with <code>sumOC</code>.</p>

## 5.2.26 complexType *sumManySCManyOCType*

diagram	<p>The diagram illustrates the structure of the <i>sumManySCManyOCType</i> complex type. It is represented as a composite element with two aggregation relationships. One relationship points to <i>sumSC</i> with a multiplicity of <i>1..∞</i>, labeled "Aggregation per merchant settlement currency". Another relationship points to <i>sumOC</i> with a multiplicity of <i>0..∞</i>, labeled "Aggregation per transaction currency".</p>
children	<a href="#">sumSC</a> <a href="#">sumOC</a>

### 5.2.30 complexType *topupTrxType*

diagram	<pre> classDiagram     class topupTrxType {         &lt;&lt;trxType&gt;&gt;         &lt;&lt;origin&gt;&gt;         &lt;&lt;aTrxOC&gt;&gt; +         &lt;&lt;aComEffSC&gt;&gt; +         &lt;&lt;aTrxNetSC&gt;&gt; +         &lt;&lt;trxDate&gt;&gt;         &lt;&lt;trxTime&gt;&gt;         &lt;&lt;trmTrxNo&gt;&gt;         &lt;&lt;ep2mercID&gt;&gt;         &lt;&lt;ep2PMSID&gt;&gt;         &lt;&lt;trmId&gt;&gt;         &lt;&lt;trmPer&gt;&gt;         &lt;&lt;prod&gt;&gt;     }     topupTrxType &lt; -- trxType     topupTrxType &lt; -- origin     topupTrxType &lt; -- aTrxOC     topupTrxType &lt; -- aComEffSC     topupTrxType &lt; -- aTrxNetSC     topupTrxType &lt; -- trxDate     topupTrxType &lt; -- trxTime     topupTrxType &lt; -- trmTrxNo     topupTrxType &lt; -- ep2mercID     topupTrxType &lt; -- ep2PMSID     topupTrxType &lt; -- trmId     topupTrxType &lt; -- trmPer     topupTrxType &lt; -- prod   </pre> <p>The diagram illustrates the structure of the <i>topupTrxType</i> complex type. It inherits from <i>trxType</i> and <i>origin</i>. It contains several attributes: <i>aTrxOC</i>, <i>aComEffSC</i>, <i>aTrxNetSC</i>, <i>trxDate</i>, <i>trxTime</i>, <i>trmTrxNo</i>, <i>ep2mercID</i>, <i>ep2PMSID</i>, <i>trmId</i>, <i>trmPer</i>, and <i>prod</i>. The <i>ep2mercID</i> and <i>ep2PMSID</i> attributes are shown with dashed lines, indicating they are optional or specific to certain merchant types.</p>

Name	Type	Use	Annotation										
c	<b>derived by: xs:string</b>	required	documentation currency code										
e	<b>derived by: xs:integer</b>	required	documentation exponent										
annotation	documentation Net merchant debt of mobile voucher sale.												

### element *topupTrxType/trxDate*

diagram	<pre> classDiagram     class trxDate   </pre> <p>Date of sale</p>
type	<b>xs:date</b>
properties	content simple
annotation	documentation Date of sale

## element *topupTrxType/trxTime*

diagram	 <b>trxTime</b> Time of sale
type	<b>xs:time</b>
properties	content simple
annotation	documentation Time of sale

## element *topupTrxType/trmTrxNo*

diagram	 <b>trmTrxNo</b> Terminal transaction number of sold mobile voucher
type	<b>xs:string</b>
properties	content simple
annotation	documentation Terminal transaction number of sold mobile voucher

## element *topupTrxType/ep2mercID*

diagram	 <b>ep2mercID</b> Only for merchants with ep2 PMS. Merchant identifier.
type	<b>xs:string</b>
properties	content simple minOcc 0 maxOcc 1
annotation	documentation Only for merchants with ep2 PMS. Merchant identifier.

## element *topupTrxType/ep2PMSID*

diagram	 <b>ep2PMSID</b> Only for merchants with ep2 PMS. PMS identifier.
type	<b>xs:string</b>
properties	content simple minOcc 0 maxOcc 1
annotation	documentation Only for merchants with ep2 PMS. PMS identifier.

## element *topupTrxType/trmId*

diagram	 <b>trmId</b> Terminal identifier
type	<b>xs:string</b>
properties	content simple
annotation	documentation Terminal identifier

## element *topupTrxType/trmPer*

diagram	 <b>trmPer</b> Terminal period during sale
type	<b>xs:string</b>
properties	content simple
annotation	documentation Terminal period during sale

## element *topupTrxType/prod*

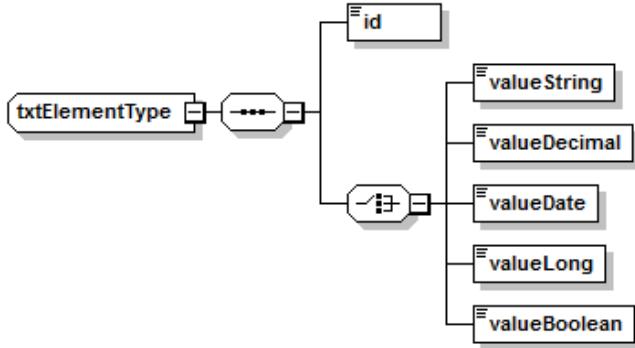

diagram	 <b>prod</b> Mobile voucher product. See processor specification for allowed values.
type	<b>xs:string</b>
properties	content simple
annotation	documentation Mobile voucher product. See processor specification for allowed values.
